DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-9, drawn to a semiconductor field effect transistor, classified in class 257, subclass 617.
 - II. Claims 10-21, drawn to a method for forming a semiconductor field-effect transistor, classified in class 438, subclass 510.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the device of group I could be manufactured by a materially different process that could include the diffusion of the blocking impurity dopants, done before the deposition of the gate electrode or the angled implantation of the blocking impurity dopants after the formation of the gate electrode.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
